Rochester, New York-[DATE]- Association Montessori International of the United States (AMI/USA) presents the 2014 Refresher Course and Workshops Conference, entitled “The Child’s Journey: Navigating the Stages of Development” on February 14-17 at the Westin Galleria Houston, in Houston, TX.

This year’s conference will build on the latest research in neuroscience, and will examine the progression of the child through the stages of development. Using the latest research which supports Dr. Montessori’s findings that the child’s passage is marked by a "continual state of growth and metamorphosis", the opening panel will set the stage for a weekend of important workshops and informational sessions helping Montessori educators and supporters deepen their understanding of natural human development.

Dr. Annette Haines will moderate a panel of experienced instructors to help participants fully understand how to recognize each unique phase, shape the child’s experiences within each unique phase, and ultimately guide him on his journey.

Workshops will be offered for school leaders, teachers, parents, assistants, and state and local leaders to include topics Montessori in the Public Schools, Advocacy and Public Policy, and School Leadership.

The annual conference is an excellent way to examine current educational structures and strategies for intellectual and legislative development, while emphasizing the importance of Montessori’s role in peace education.
